

Screen Shots

❖ Display all the files

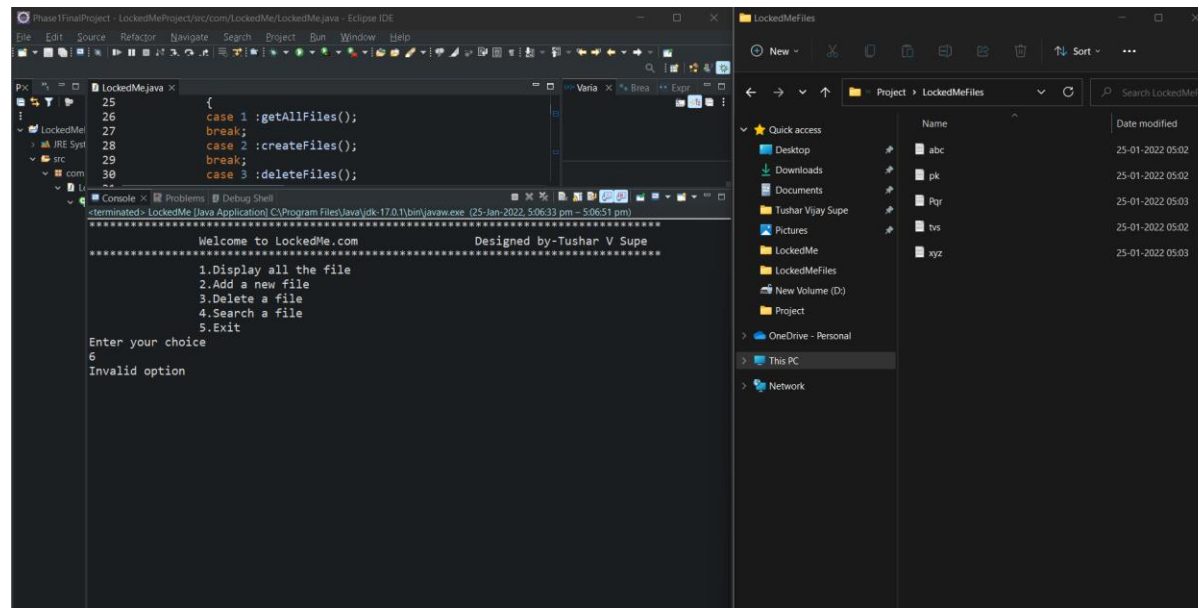

1. If files does not exist

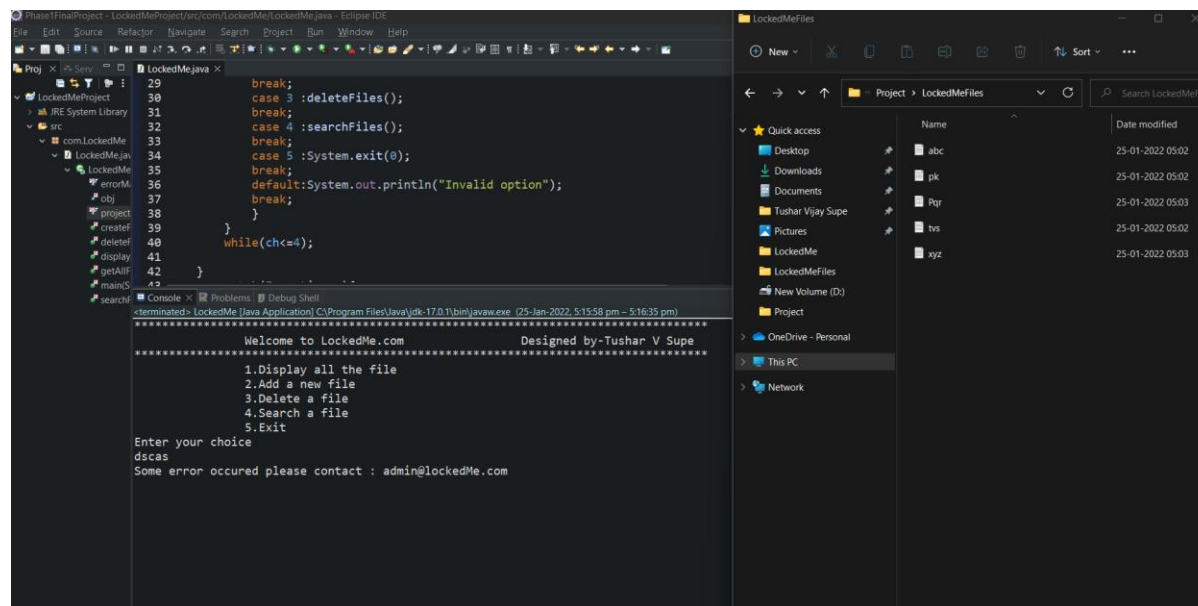

2. If file exist

3. If wrong choice

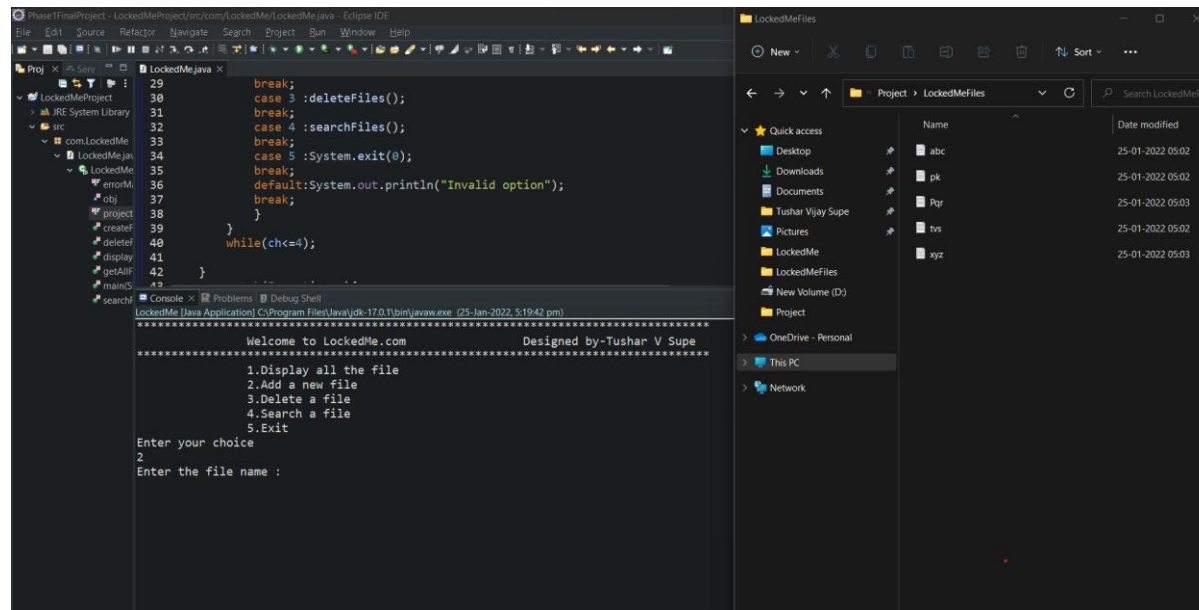

4. If invalid input

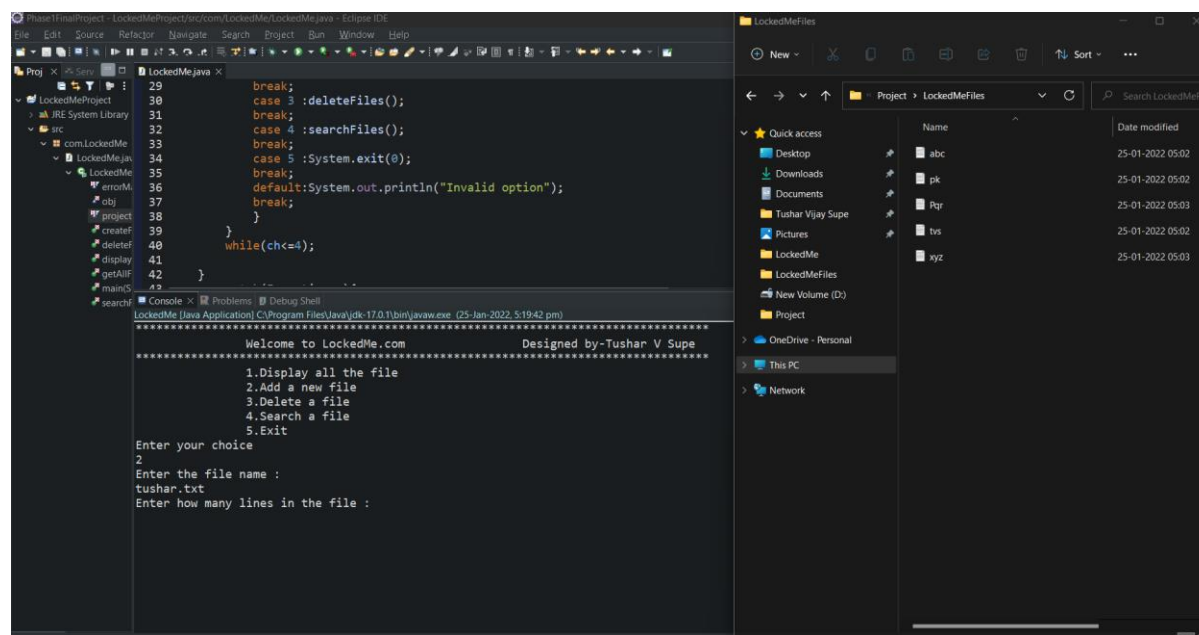

❖ Add a new file

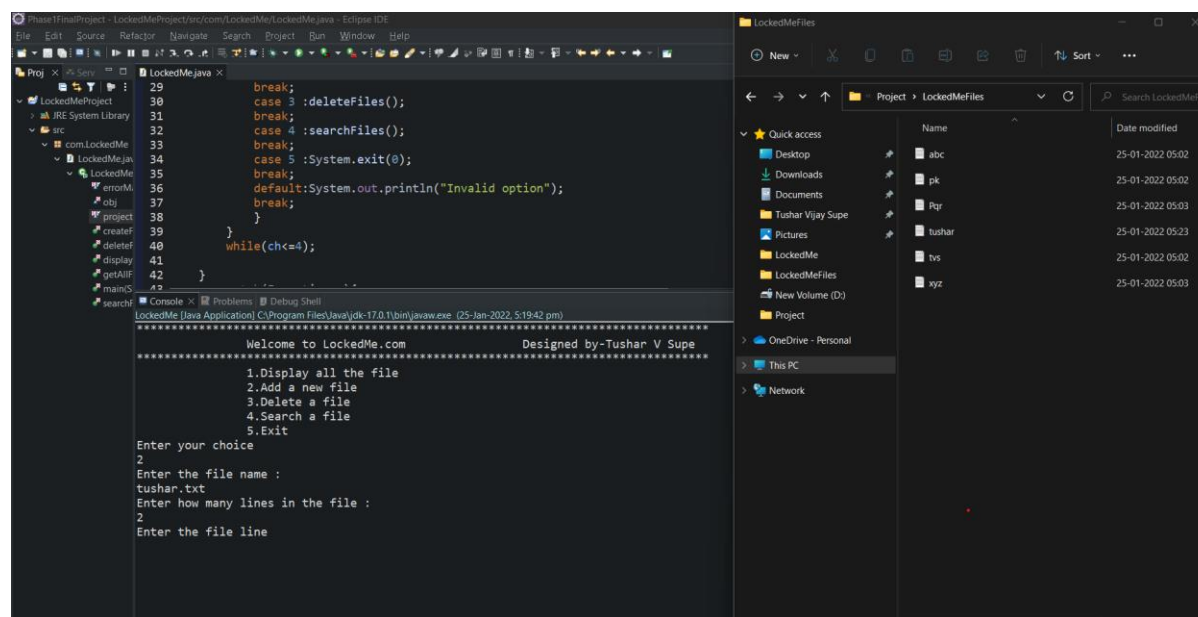

1. Enter your choice

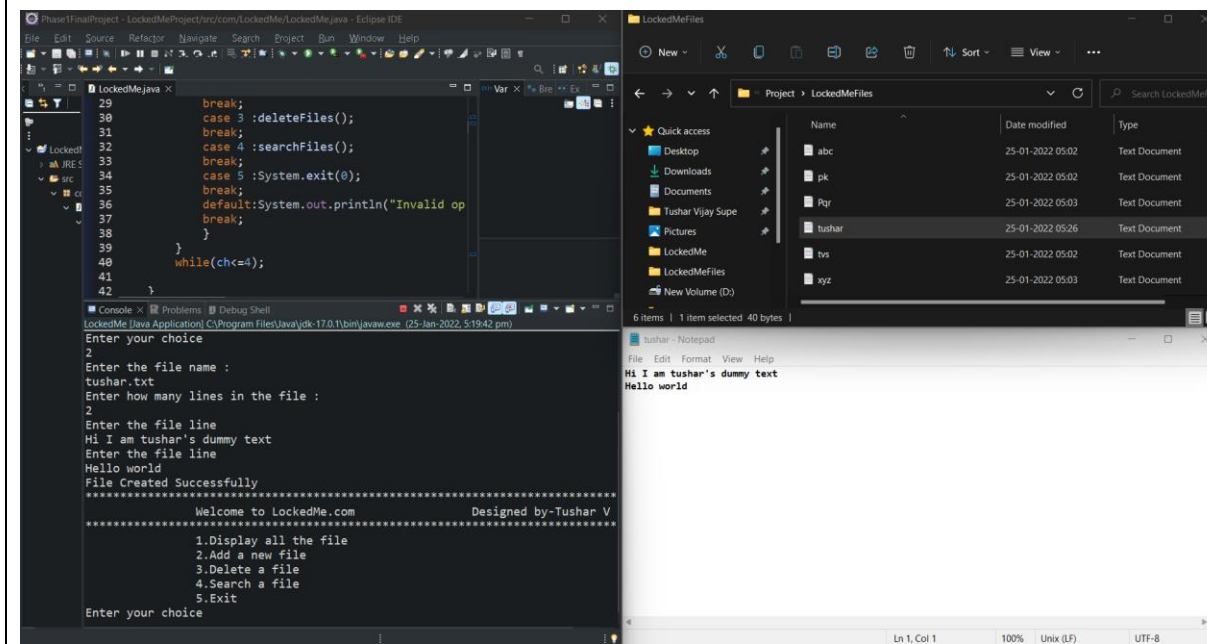

2. Enter the file name

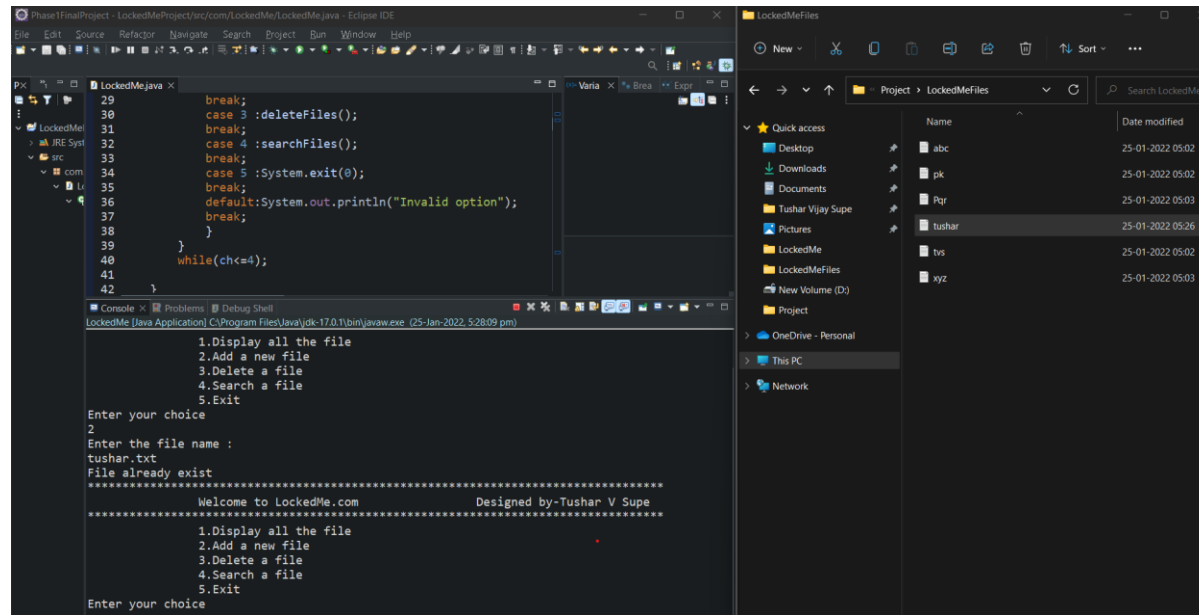

3. Enter how many lines in the file

4. Enter the file lines

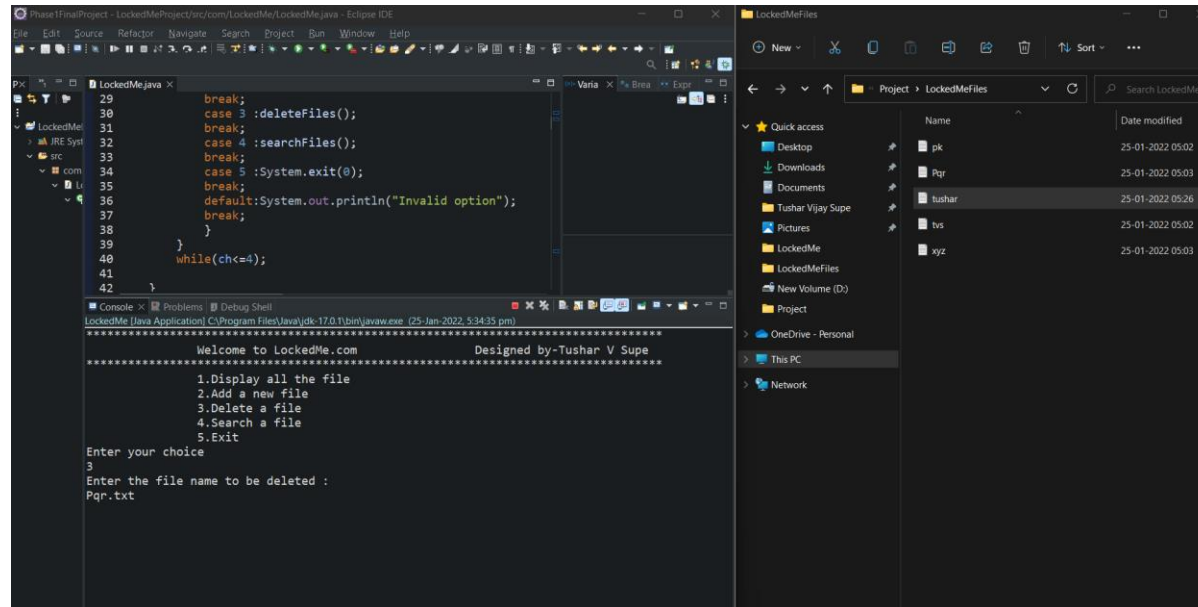

5. If file already exist

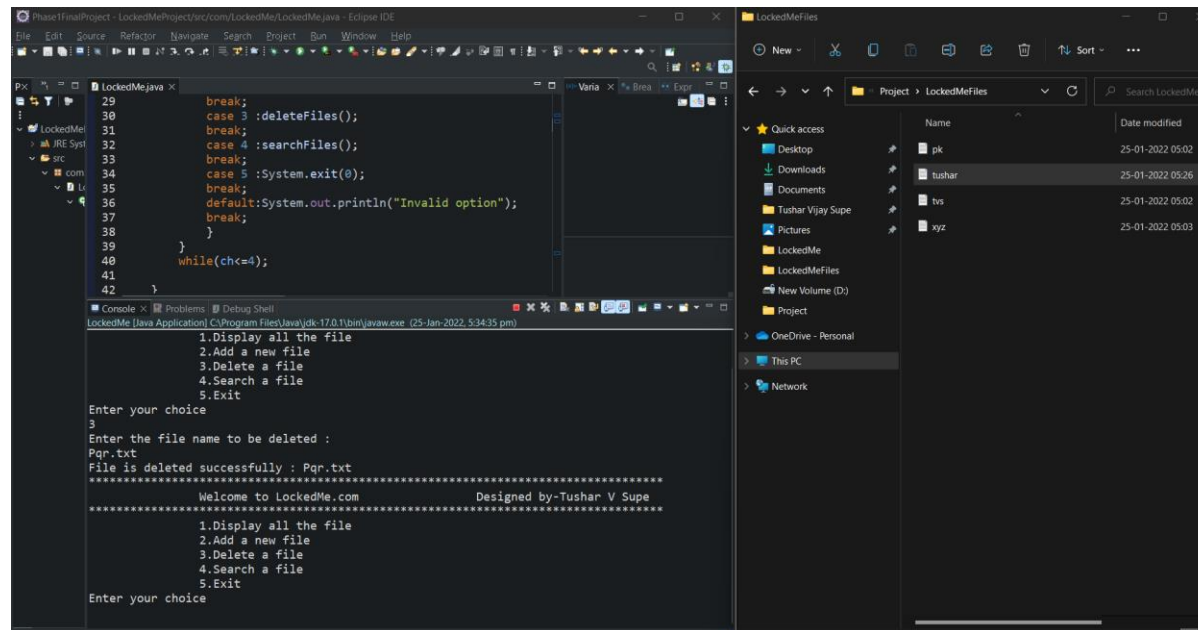

❖ Delete a file

1. If file exist

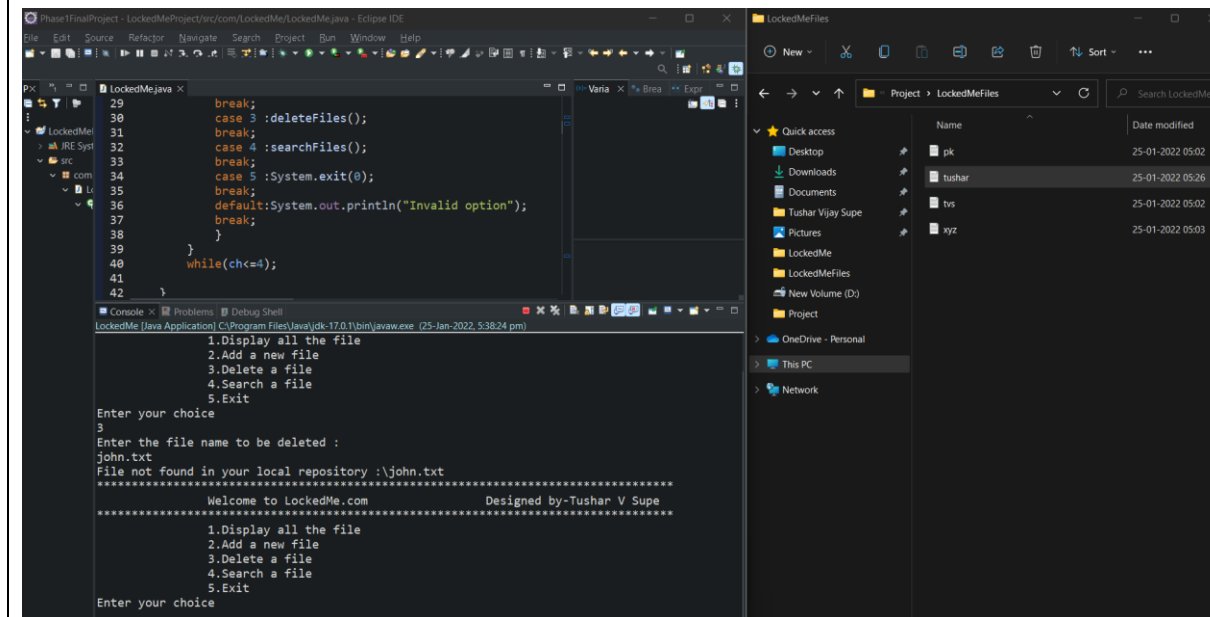

- Enter the file name to be deleted

- After clicking enter

2. If file does not exist

❖ Search a file

1. If file exist

The screenshot shows the Eclipse IDE with the 'LockedMe.java' file open. The code includes a menu-driven application with options to display, add, delete, search, and exit files. The console output shows the user selecting option 4 (Search a file) and entering 'tushar.txt'. The application successfully finds the file and displays its contents: 'Welcome to LockedMe.com' and 'Designed by-Tushar V Supe'. The 'LockedMeFiles' project explorer on the right shows the file 'tushar' in the 'Project' folder.

```
29      break;
30      case 3 :deleteFiles();
31      break;
32      case 4 :searchFiles();
33      break;
34      case 5 :System.exit(0);
35      break;
36      default:System.out.println("Invalid option");
37      break;
38      }
39      while(ch<=4);
40      }
41      }
42      }
```

```
LockedMe [Java Application] C:\Program Files\Java\jdk-17.0.1\bin\java.exe (25-Jan-2022, 5:41:25 pm)
1.Display all the file
2.Add a new file
3.Delete a file
4.Search a file
5.Exit
Enter your choice
4
Enter the file name to be searched :
tushar.txt
tushar.txt==>>>This file is available.
